

## AN ALL-PURPOSE INDOOR/OUTDOOR CART

The all-new Starcart™ Indoor/Outdoor Model 20 (I/O 20) from Techstar Plastics Inc. is a perfect handling aid for nurseries, landscape gardening, farming, stables, kennels and many more indoor/outdoor operations. It allows a single person to handle a load of up to 400 pounds. Its molded body has a level carrying capacity of 10 cubic feet – more, if the product or material is piled up. This compares with just 5.5 cubic feet for the average wheelbarrow. Rotomolded construction in linear LDPE assures true Techstar toughness and outstanding corrosion resistance. The 20" (500 mm) semi-pneumatic wheels are fitted with ball bearings to assure smooth rolling for the heaviest loads. The wheels roll effortlessly over gravel, grass and other uneven surfaces. For all its strength and durability, Starcart™ I/O 20 weighs just 65 pounds, for easy shipping and handling.

The innovative drive assembly allows V-belt power to be transmitted directly through the bearings, which results in more economical operation and increased bearing life. Specially formed structural components provide for a sturdy, yet aerodynamic support package.

The FGBC fan is certified through the Bioenvironmental and Structural Systems Lab (Bess Lab) at the University of Illinois.

Founded in 1928, American Coolair Corporation is a manufacturer of ventilation and evaporative cooling systems for the poultry, swine and greenhouse industries.

## DILLEN PRODUCTS ADDS IN-MOLD LABELLING

Dillen Products has added in-mold labelling to its extensive line-up of branding options for growers. This process combines high-speed pot production with heavy-duty, multi-colour labels molded directly into the pot. This packaging option delivers crisp, photo-quality graphics and text unique to the grower's brand and plant material – creating maximum impact at retail. Labels are UV-protected and waterproof to prevent fading or damage to the image. In-mold labelling is currently available for Dillen's T1G nursery container and other select products.

In-mold labelling is the fifth and newest process for Dillen's custom graphics offerings, which also includes offset printing, picturePot® containers, inkjet printing, and adhesive labelling.

## SURE FLOW ELIMINATES IRRIGATION PATHOGENS

CH2O Incorporated has introduced its patented Sure Flow irrigation line treatment, which promotes healthy plants by preventing the spread of plant disease and formation of crystalline mineral deposits in irrigation emitters. According to the company, Sure Flow helps growers create a sterile environment by eliminating fungal, bacterial and viral pathogens from irrigation water that can cause disease or kill agricultural and ornamental plants. Sure Flow enables irrigation emitters to flow at optimum rates designed for individual plant varieties. Sure Flow saves money by reducing the number of drip tapes, emitters and irrigation systems that need replacement. Sure Flow is extremely cost-effective since it allows simple generation of a patented chelant disinfectant compound on location. Comprehensive on-site testing by CH2O personnel on a routine basis ensures that proper treatment levels are maintained.

This enhances product quality and plant marketability. It also reduces maintenance costs.

## WAISTIE POUCH™ STORAGE DURING CROP MAINTENANCE

Triple Z Inc. received a silver medal for its patent pending product, the Waistie Pouch™, in the lawn and garden category at the INPEX tradeshow (Invention and New Product Exposition) in June.

The Waistie Pouch frees the user's hands for routine plant care tasks thanks to a unique, ergonomic waistband system that features a sturdy zip-front pouch.

The pouch holds light debris and thorny clippings while you work, then unzips to fully open and easily empty the contents into a waste receptacle. Convenient net side pockets hold gloves, tools, personal items or fresh cuttings, while the adjustable waistband incorporates a holster specially designed for clippers.
